System Overview

CubeMed HIS (Hospital Information System) is a full-stack, multi-hospital SaaS platform designed for Indian healthcare institutions. The system integrates every department of a hospital — from patient registration and OPD/IPD management to pharmacy, billing, diagnostics, HR, and CRM — into a single, unified web interface. The platform is role-based, ensuring each user sees only the modules relevant to their function.

Tech Stack

Feature	Description
Frontend Framework	React 18 with Vite build tool — lazy-loaded pages for performance
Styling	Tailwind CSS v3 with custom design system; Font Awesome icons
Routing	React Router DOM v6 — protected routes with role-based access
State Management	React hooks (useState, useEffect) + localStorage for session persistence
Animations	Framer Motion for page transitions and card animations
Notifications	React Toastify for toast alerts; custom reminder/bell system
Backend	Python FastAPI — async REST API with SQLAlchemy ORM
Database	PostgreSQL with async driver (asyncpg)
Authentication	JWT Bearer tokens (access + refresh); token blacklist on logout
Deployment	Linux server, Nginx reverse proxy, HTTPS via Let's Encrypt
Integrations	Google Sheets, Google Drive, Meta Ads API

Authentication & Security

Feature	Description
JWT Auth	Access tokens stored in localStorage; Authorization: Bearer header on all API calls
Role-Based Access	Roles define permissions; sidebar and routes filter based on user permissions
Token Blacklist	On logout, tokens are blacklisted server-side to prevent reuse
Protected Routes	React ProtectedRoute wrapper redirects unauthenticated users to /login
Multi-Hospital	Non-admin users are scoped to their hospital_id; admin sees all hospitals
Permission Levels	Granular CRUD permissions (e.g., leads:read, leads:write) or wildcard *

Application Shell

The main application shell consists of three parts: a collapsible left Sidebar, a Top Header bar, and the main content area. The Layout component wraps all protected routes and provides the logout function down through props.

Top Header

Feature	Description
Hamburger Toggle	Collapses/expands the sidebar; on mobile shows overlay drawer
Search Bar	Globally visible search input (UI ready; backend search hookable)
Reminder Bell	Real-time follow-up reminder notifications with sound alerts
User Avatar	Shows first 2 initials; displays username and current date-time on click
Profile Dropdown	View Profile, Edit Profile, and Logout options
Profile Card	Animated modal showing full name, email, roles, join date, active status
Edit Profile	Inline form to update full name, email, and password via <code>/api/auth/update</code>
Logout Flow	Shows animated success modal then clears localStorage and redirects to <code>/login</code>
Follow-up Alert	Pops up when there are today's pending follow-up tasks for the user

Sidebar Navigation

The sidebar is a dark slate-900 panel with a background image overlay. It shows the CubeMed HIS logo, the logged-in user's name, role(s), and hospital. Menu items are filtered by the user's permission set computed from backend role data.

Feature	Description
Collapsible	Collapses to icon-only mode on desktop; full drawer on mobile with overlay
User Info	Shows avatar, full name, role(s), and hospital name below the logo
Permission Filtering	Only shows menu items the user has permission for
Submenu Support	Expandable submenus (e.g., Patient Management, Clinical, HR & Staff)
Active Highlighting	Blue left border on active route; submenu auto-expands on navigate
Mega Menu	Admin-only 3-column quick navigation panel with hospital cross-reference
Role Detection	Reads roles from <code>/api/auth/me</code> and <code>/api/roles/</code> on mount
Hospital Badge	■ Shows hospital name in green for non-admin users

Sidebar Menu Structure

Dashboard Overview KPIs & quick links Route: /dashboard	Appointments Schedule & manage appointments Route: /appointments	Patient Management Reception, Registration, OPD, IPD Route: /patients
Doctors Doctor roster & departments Route: /doctors	Clinical EMR, Nursing, OT, Teleconsult Route: /emr	Pharmacy Drug dispensing & stock Route: /pharmacy
Laboratory Lab orders & results Route: /laboratory	Radiology Imaging orders & reports Route: /radiology	Blood Bank Blood inventory management Route: /blood-bank
Billing & Finance Billing, revenue, insurance Route: /billing	Certificates Medical & legal certificates Route: /certificates	HR & Staff Staff, attendance, leaves Route: /hr
Stock Management General inventory Route: /inventory	MIS Reports Analytics & export Route: /reports	Users & Roles Users, roles, hospitals Route: /users

Overview

The Dashboard is the first screen after login. It aggregates real-time KPIs from multiple backend services, provides quick-action shortcuts, shows recent appointments, and renders a full module navigation grid. Admins see an all-hospitals view with a hospital filter dropdown.

KPI Cards (8 Cards)

Feature	Description
Today's Appointments	Total appointments booked for today — links to /appointments
OPD Waiting	Count of patients waiting in OPD queue — links to /opd
Admitted Patients	Currently admitted IPD patients — links to /ipd
Bed Occupancy	Percentage of beds occupied — calculated from IPD stats
Today's Revenue	Today's total billing revenue in ■ — links to /billing
Lab Orders Pending	Pending lab test orders — links to /laboratory
Pharmacy Low Stock	Count of drugs below minimum stock level — links to /pharmacy
Today's Surgeries	Total OT procedures scheduled today — links to /ot

Quick Actions (8 Buttons)

Feature	Description
New Appointment	Jumps to /appointments to create a new booking
Register Patient	Jumps to /patients/registration for new patient intake
OPD Queue	Opens OPD waiting list at /opd
IPD Admissions	Opens inpatient management at /ipd
Lab Orders	Opens laboratory module at /laboratory
Billing	Opens billing & revenue at /billing
Pharmacy	Opens pharmacy dispensing at /pharmacy
Blood Bank	Opens blood bank inventory at /blood-bank

Recent Appointments Table

Shows the last 5 appointments with: Token #, MRN badge, Patient name & mobile, Doctor, Department, Date, Time, Type (color badge), and Status (color badge). Animated rows via Framer Motion. "View All" links to full appointments page.

Module Navigation Grid (14 modules)

A responsive icon grid (3–7 columns depending on screen size) with colored icon tiles for all 14 hospital modules. Each tile is clickable and navigates to the module route.

Reception (/reception)

Front-desk reception module for managing patient check-ins, token assignments, and day-to-day patient flow into the hospital.

Feature	Description
Patient Check-In	Search and check-in registered patients; assign token numbers
Queue Display	Live view of patients waiting at reception
Walk-in Handling	Quick registration for unregistered walk-in patients
Token Management	Generate and manage sequential token numbers per department
Appointment Linking	Link check-in to pre-booked appointments

Patient Registration (/patients/registration)

Comprehensive patient registration module for capturing full demographic and medical history. Creates a unique MRN (Medical Record Number) for each patient.

Feature	Description
MRN Generation	Auto-generates unique Medical Record Number on registration
Demographics	Full name, DOB, age, gender, blood group, address, contact
Insurance Info	Insurance provider, policy number, TPA details
Emergency Contact	Next of kin name and contact information
Document Upload	Upload ID proof, insurance card, previous records
Duplicate Check	Warns if a patient with similar name/mobile already exists
Consent Form	Digital consent form acknowledgement
Hospital Assignment	Auto-assigns to user's hospital or admin selects

Patient Portal (/patients/portal)

Feature	Description
Medical History	Full history of visits, diagnoses, prescriptions, and reports
Lab Results	View and download laboratory test results
Billing History	View past invoices and outstanding dues
Appointment History	List of all past and upcoming appointments

Feature	Description
Prescription View	View EMR prescriptions digitally

OPD Management (/opd)

Feature	Description
OPD Queue	Real-time waiting list with token numbers and queue position
Doctor Assignment	Assign patients to specific doctors based on department
Consultation Status	Track patient through: Waiting → In Consultation → Completed
Stats Widget	Total OPD today, waiting count, completed consultations
Filter by Doctor	Filter queue by specific doctor or department
Priority Queue	Mark emergency/priority patients for expedited care

IPD / Ward Management (/ipd)

Feature	Description
Bed Management	Visual bed map with occupancy status (available/occupied/reserved)
Admissions	Admit patients with bed assignment, admitting doctor, diagnosis
Discharge Process	Structured discharge with summary and billing clearance
Bed Occupancy %	Real-time occupancy percentage displayed in dashboard
Ward Details	Multi-ward support (General, ICU, NICU, Maternity, etc.)
Patient Timeline	Full activity log of IPD stay — notes, orders, vitals

EMR / Prescriptions (/emr)

Electronic Medical Records module for doctors to create, view, and manage patient prescriptions and clinical notes digitally.

Feature	Description
Prescription Builder	Add medications with dosage, frequency, and duration
Diagnosis Entry	ICD-10 based diagnosis coding and free-text notes
Vitals Recording	BP, pulse, temperature, SpO2, weight, height
Complaint History	Chief complaint and history of presenting illness
Investigations	Order lab tests and radiology from within EMR
Follow-up Date	Set next follow-up date with automatic reminder creation
PDF Generation	Generate printable prescription PDF with hospital letterhead
Patient Medical Report	PatientMedicalReport component renders full clinical history

Nursing Station (/nursing)

Feature	Description
Vitals Monitoring	Record and track vitals every hour for admitted patients
Medication Administration	Record drug administration times and doses given
Nursing Notes	Free-text nursing observations and handover notes
Patient Alerts	Flag critical patients for immediate doctor attention
Shift Management	Nurse shift assignment and duty roster

OT Management (/ot)

Feature	Description
OT Scheduling	Book operation theatres with surgeon, anaesthetist, and time slot
Pre-op Checklist	Digital pre-operative checklist verification
OT Status Board	Real-time OT occupancy and next procedure visibility
Surgical Notes	Intra-operative notes and findings documentation
Post-op Care	Link to IPD for post-operative ward monitoring
Today's Count	Total surgeries today shown in dashboard KPI

Teleconsultation (/teleconsult)

Feature	Description
Virtual Appointments	Schedule and manage video/audio teleconsultation sessions
Doctor Availability	Set and view doctor availability for remote consultations
Session Linking	Link teleconsultation notes to patient EMR
Prescription	Generate digital prescriptions from teleconsult sessions

Laboratory (/laboratory)

Feature	Description
Test Orders	Receive lab orders from OPD/IPD/EMR; track by status
Sample Collection	Record sample collection time, type, and collector
Result Entry	Enter test results with reference ranges; flag abnormalities
Report Generation	Generate PDF lab reports with hospital branding
Pending Dashboard	Count of pending lab orders shown in main dashboard KPI
Test Catalogue	Master list of available tests with pricing
Result Dispatch	Mark results as dispatched to ward/OPD

Radiology (/radiology)

Feature	Description
Imaging Orders	Receive X-ray, CT, MRI, USG orders from clinical modules
Modality Queue	Queue management per imaging modality
Report Entry	Radiologist enters findings and impression
Image Management	Link/upload DICOM or image files to reports
Report Dispatch	Send signed reports back to ordering doctor

Blood Bank (/blood-bank)

Feature	Description
Inventory Management	Track blood units by blood group and component type
Donor Management	Donor registration, donation history, and eligibility checks
Crossmatch	Record crossmatch requests and results
Issue & Return	Issue blood to wards; handle returned units
Expiry Alerts	Notify when blood units are near expiry date
Requisition	Process blood requisition from wards and OT

Pharmacy (/pharmacy)

Feature	Description
Dispensing Counter	Process prescriptions and issue drugs to patients
Drug Catalogue	Master list with generic/brand names, category, and pricing
Stock Levels	Real-time stock with low-stock threshold alerts
Low Stock Alert	Dashboard KPI shows count of drugs below minimum quantity
Purchase Orders	Raise purchase orders to suppliers for restocking
Batch Management	Track drugs by batch number and expiry date
Return Management	Process drug returns from wards and patients
Billing Integration	Auto-generate drug billing items on dispense

Stock Management (/inventory)

Feature	Description
General Inventory	Track all non-drug hospital consumables and equipment
Stock Schema	Items tracked by category, supplier, unit, quantity, reorder level
Issue Vouchers	Issue stock to departments with digital approval workflow
Stock Audit	Periodic physical stock verification and variance reporting
Supplier Management	Supplier master with contact and payment terms
Purchase History	Full purchase order history and GRN (Goods Received Note)

Billing & Revenue (/billing)

Feature	Description
Invoice Generation	Create itemized bills for OPD, IPD, lab, pharmacy, OT services
Payment Collection	Record cash, card, UPI, and insurance payments
Revenue Dashboard	Today's revenue KPI in main dashboard
Discount Management	Apply discounts with authorization workflow
Advance Collection	Collect and adjust advance payments
Bill Printing	Generate PDF invoices with hospital letterhead
Outstanding Dues	Track unpaid bills and send payment reminders
Daily Collections	Summary report of daily revenue by payment mode

Insurance / TPA (/insurance)

Feature	Description
TPA Management	Register and manage Third Party Administrator details
Claim Processing	Submit and track insurance claims per patient
Authorization	Record pre-authorization numbers and limits
Cashless	Mark bills as cashless and bill to insurance directly
Settlement	Track claim settlements and payment reconciliation

Quotations (/leads/quotations)

Feature	Description
Quote Builder	Create itemized treatment quotations for patients/leads
Status Tracking	Draft → Sent → Accepted → Rejected workflow
PDF Export	Generate professional quotation PDF documents
Hierarchy View	QuotationsPageHierarchy shows quotes across hierarchy levels
Conversion	Convert accepted quotations to payment orders

Payments (/leads/payments)

Feature	Description
Payment Records	Track all payments received against leads/quotations
Payment Schema	Amount, date, mode, reference, status, created_by
Receipt Generation	Generate payment receipt PDFs
Pending Payments	View and follow up on pending/partial payments

Staff Management (/hr)

Comprehensive HR module with multiple components: EmployeeManagement, EmployeeList, EmployeeForm, EmployeeDetails, and HRStaffModule. Admin/HR role required for full access.

Feature	Description
Employee Directory	Searchable and filterable list of all staff members
Employee Profile	Full profile: personal info, department, designation, join date
Employee Form	Create/edit employee with validation and document upload
Department Filter	Filter employees by department or designation
HR Staff Module	HRStaffModule includes tabbed view: Overview, Attendance, Leave
Employee Dashboard	EmployeeDashboard shows leave balance, attendance summary
Profile Management	Employees can update their own profile via self-service
Document Store	Attach documents (offer letter, ID, contracts) to employee profile

Attendance Management (/attendance)

Feature	Description
Daily Attendance	Mark present/absent/half-day for each employee
Check-in/out	Record punch-in and punch-out times
Attendance Report	Monthly summary per employee: days present, absent, late
Holiday Calendar	Define public holidays; system excludes them from attendance count
Admin View	HR/Admin sees full attendance; employees see only their own

Leave Requests (/my-leave-requests, /leave-requests)

Feature	Description
Leave Application	Employees apply for leave with type, dates, and reason
Leave Types	Casual, Sick, Earned, Maternity/Paternity, etc.
Approval Workflow	Manager approves/rejects; auto notification on decision
Leave Balance	View available vs consumed leave per type
Admin Panel	/leave-requests shows all leave requests with bulk approve/reject
Leave Request Card	LeaveRequestCard component renders single request in card format

Certificates (/certificates)

Feature	Description
Medical Certificates	Generate sickness/fitness certificates for patients
Disability Cert	Issue disability and medical fitness certificates
Employment Cert	Generate employment/experience certificates for staff
Custom Templates	Hospital letterhead, doctor signature, and certificate number

Leads Management (/leads)

Full CRM pipeline for managing enquiries and converting them to patients. Supports hierarchy-based lead assignment across multi-level sales teams.

Feature	Description
Lead Dashboard	LeadsDashboard with KPIs: total leads, new today, converted, pipeline value
All Leads Table	AllLeadsTable with search, filter, sort, and pagination
New Leads	NewLeadsTable filtered to show recently imported/created leads
Imported Leads	ImportedLeadsTable with CSV import via Google Sheets integration
Lead Detail Page	Full lead profile: notes, follow-ups, timeline, quotation history
Lead Activity	LeadActivityTimeline renders chronological activity log
Lead Status	LeadStatus pill component: New, Contacted, Interested, Qualified, Converted, Lost
Lead Filter	LeadFilter component: filter by status, source, assignee, date range
Notes Section	Add and view notes on leads
Follow-up Section	Schedule and view follow-up tasks from lead profile
Duplicate Check	DuplicateLeadsSection flags potential duplicate entries

Lead Assignment & Hierarchy (/assigned-leads, /hierarchy-assignment)

Feature	Description
Assign Leads	AssignLeads component — assign leads to team members
Hierarchy Assignment	HierarchyAssignment page assigns leads through org hierarchy
AssignLeadsHierarchy	Hierarchy-aware assignment with parent-child role structure
HierarchyLeadsDashboard	View all leads grouped by hierarchy level
HierarchyLeadView	Individual view of leads for a hierarchy node
Subordinate Assignment	SubordinateAssignment page for team lead to assign down

Enquiry Tracking (/enquiries/:id)

Feature	Description
Enquiry Profile	EnquiryProfileView — detailed view of a single enquiry/lead
Enquiry Tracking	EnquiryTracking page lists all enquiries with status
Communication Log	CommunicationLog component records all interactions
Complaints	ComplaintsModule — log and resolve customer complaints
Feedback System	FeedbackSystem component captures patient/lead satisfaction scores

Customers (/customers)

Feature	Description
Customer List	All converted leads/patients in CRM customer view
Customer Profile	Full profile with treatment history and payment history
Customer Profile View	CustomerProfileView at /customers/:customer_id
Loyalty Points	LoyaltyPoints component shows earned and redeemable points

Franchise (/franchise)

Feature	Description
Franchise Management	Manage franchise partner information and agreements
Franchise Card	FranchiseCard component renders franchise summary
Partner Portal	Franchise partners see their own lead pipeline

Loyalty Program (/loyalty)

Feature	Description
Points System	Award points on payments and engagements
Redemption	Patients can redeem loyalty points against bills
Tier Management	Bronze/Silver/Gold tiers with different benefit levels

User Management (/users/list)

Feature	Description
Users Table	List all system users with search and filter
Create User	Create new users with username, password, email, and role assignment
Edit User	Update user details and role assignments
Activate/Deactivate	Toggle user active status without deletion
Hospital Assignment	Assign users to specific hospitals (multi-hospital support)
Password Reset	Admin can reset user passwords

Roles & Permissions (/users/roles)

Feature	Description
Roles Manager	RolesManager component — CRUD operations on roles
Create Role	CreateRoleModal — define role name and select permissions
Permission Matrix	Granular module-level permissions: dashboard, leads, billing, etc.
CRUD Permissions	Supports read/write/delete per module (e.g., leads:read, leads:write)
Wildcard	Assign * permission to grant all module access (super-admin)
Role Assignment	Assign one or multiple roles to each user

Hospital Management (/users/hospitals)

Feature	Description
Hospital List	View all registered hospitals with code, name, and status
Create Hospital	Register new hospital with code, name, address, contact
Edit Hospital	Update hospital details
Hospital Scoping	All modules auto-filter data by hospital_id for non-admin users
Admin Filter	Dashboard has hospital dropdown for admin to switch context

User Hierarchy (/hierarchy-assignment)

Feature	Description
Org Hierarchy	Define multi-level user hierarchy (Manager → TL → Executive)
Fix Service	fix_user_hierarchy_service.py repairs broken hierarchy links
Hierarchy Helper	hierarchy_helper.py provides utilities for tree traversal
Lead Visibility	Leads visible up the hierarchy — managers see team leads' leads
Assignment Flow	HierarchyAssignment UI allows drag-and-assign down the org chart

MIS Reports (/reports)

The Reports module has multiple implementations: ReportsPage, ReportsEnhanced, Reports_new, Reports_old — the active one is ReportsPage. LeadReportsPage is for CRM-specific analytics.

Feature	Description
Daily Reports	Appointments, admissions, discharges, revenue for selected date
OPD/IPD Reports	Department-wise patient counts and doctor utilization
Revenue Reports	Revenue by service category, doctor, and department
Lead Reports	LeadReportsPage — lead conversion funnel, source analysis
Attendance Report	HR attendance summary by month and department
Stock Reports	Inventory levels, consumption, and purchase summary
Custom Date Range	Filter all reports by custom date range
Export Options	CSV/PDF export buttons throughout report pages

Dashboard Analytics

Real-time KPIs on the main dashboard pull from 7 separate backend API endpoints simultaneously using Promise.allSettled. Failed endpoints gracefully show "—" without breaking the UI. DashboardTable provides additional tabular analytics at /reports.

Task Management (/tasks)

Feature	Description
Task List	View all assigned tasks with priority and due date
Task Schema	Title, description, assigned_to, due_date, priority, status
Create Task	Create tasks and assign to users or teams
Task Status	Pending → In Progress → Completed → Cancelled
Overdue Alerts	Visual indicator for tasks past due date

Support Tickets (/tickets)

Feature	Description
Ticket List	View and filter support tickets by status and priority
Ticket Schema	Subject, description, category, priority, status, assigned_to
Ticket Detail	TicketDetails page at /tickets/:ticket_id — full conversation thread
Ticket Status	Open → In Progress → Resolved → Closed
Priority Levels	Low / Medium / High / Critical
Assignment	Assign tickets to support staff with email notification

Document Store (/documents)

Feature	Description
Document Uploader	DocumentUploader component — drag-and-drop file upload to Google Drive
Document Schema	File name, type, size, uploader, linked entity (patient/employee)
Document List	View uploaded documents with download links
Google Drive Integration	Files stored in Google Drive via service account
Access Control	Documents visible only to users with document permission

Reminder System

Feature	Description
useReminders Hook	useReminders.js — fetches pending reminders for current user
ReminderService	ReminderService.jsx — manages reminder polling and sound alerts
ReminderModal	ReminderModal.jsx — popup to view and act on a reminder
ReminderPopup	Non-modal popup that shows reminder details with snooze/dismiss
ReminderManager	ReminderManager.jsx — full CRUD for user's reminders
RemindersDashboard	Full dashboard view of all reminders with filters
AdminReminderDash	AdminReminderDashboard.jsx — admin view of all users' reminders
DashboardBell	DashboardReminderNotification — bell icon in header with badge count
AllFollowUpsModal	AllFollowUpsModal.jsx — shows all today's follow-ups in one modal

Follow-up Notifications

Feature	Description
FollowUpNotification	Popup shown on login if user has follow-ups due today
FollowUpNotifications	Persistent component listing all upcoming follow-ups
Sound Alert	soundUtils.js — plays notification chime for due reminders
LoginNotification	LoginNotification.jsx — welcome message after successful login
Background Notifier	remainder_notifier.py — backend job that sends push/email alerts
Meta Scheduler	meta_scheduler.py — schedules Meta Ads lead sync at intervals

Toast Notifications

Feature	Description
React Toastify	Global ToastContainer in App.jsx — top-right, 3s auto-close
NotificationToast	Custom NotificationToast component for styled alerts
Success/Error	Green success and red error toasts on all form submissions
Follow-up Reminder	Special toast style for follow-up due reminders

Login Screen (/login)

Feature	Description
LoginForm	Centered card with username and password fields
JWT Storage	Access token stored in localStorage on successful login
Auth Hook	useAuth() in App.jsx manages isAuthenticated state
Remember Session	Token persisted in localStorage survives browser refresh
Redirect	Successful login redirects to /dashboard; failed shows error toast
Register Link	"Don't have an account?" toggles to RegisterForm
Loading State	Button shows spinner during authentication request

Register Screen

Feature	Description
RegisterForm	Registration form with name, username, email, password fields
Validation	Client-side validation before submitting to /api/auth/register
Auto Login	Successful registration auto-logs in the user
Back to Login	"Already have an account?" link returns to login

Profile Management

Feature	Description
View Profile	ProfileCard in TopHeader fetches /api/auth/me for live data
Edit Profile	EditProfileForm — update full name, email, password
ProfileEditModal	ProfileEditModal.jsx — standalone modal for profile editing
EditProfileForm	EditProfileForm.jsx in layout — inline form in header
API Endpoint	POST /api/auth/update — updates user profile server-side
Session Refresh	Page reloads after profile update to reflect new values

Route	Component	Permission
/login	LoginForm	Public
/dashboard	Dashboard	All users
/appointments	AppointmentsPage	appointments
/reception	ReceptionPage	patients
/patients/registration	PatientRegistrationPage	patients
/patients/portal	PatientPortalPage	patients
/opd	OPDManagementPage	opd
/ipd	IPDWardPage	ipd
/emr	EMRPage	emr
/nursing	NursingStationPage	nursing
/ot	OTManagementPage	ot
/teleconsult	TeleconsultationPage	teleconsult
/pharmacy	PharmacyPage	pharmacy
/laboratory	LaboratoryPage	laboratory
/radiology	RadiologyPage	radiology
/blood-bank	BloodBankPage	blood_bank
/billing	BillingRevenuePage	billing
/insurance	InsuranceTpaPage	insurance
/certificates	CertificatesPage	certificates
/doctors	DoctorManagementPage	doctors
/departments	DepartmentManagementPage	departments
/leads	LeadsPage	leads
/leads/quotations	QuotationPage	leads
/leads/payments	PaymentsPage	leads
/leads/:leadId	LeadDetailPage	leads
/assigned-leads	AssignLeads	leads
/hierarchy-assignment	HierarchyAssignment	leads
/enquiries/:id	EnquiryProfileView	leads
/customers	CustomersPage	leads
/customers/:id	CustomerProfileView	leads
/loyalty	LoyaltyPage	leads
/franchise/*	FranchisePage	leads
/hr/*	StaffManagementPage	hr

Route	Component	Permission
/attendance	AttendancePage	hr
/my-leave-requests	LeaveRequestsPage	hr
/leave-requests	LeaveRequestCard	hr
/inventory/*	StockManagementPage	inventory
/billing/*	BillingRevenuePage	billing
/tasks/*	TasksPage	All
/tickets/*	TicketsPage	All
/tickets/:id	TicketDetails	All
/documents/*	DocumentsPage	All
/reports/*	ReportsPage	reports
/users/list	UsersPage	users
/users/roles	RolesPage	roles
/users/hospitals	HospitalManagementPage	admin
/notes	NotesSection	All
/follow-up	FollowUpSection	All
/employee/:id	EmployeeDetail	hr
